### Reflective Paper- Classroom Layout

In my classroom layout, I have included the following sections and areas.

Arts, Craft, and Painting, Dramatic area, Computer, Library, Area, and Listening area, Mathematics, and Science, Music, Sand, Water Writing table, Bathroom, teacher closets, Sink, Children's Cubby and Seating area for the children. Also, I have a play area.

The following are the list of materials that I used to complete my layout:

Shaping block toy, Doll toy, Plastic cubes, Paper board Labels, Small different color plastic people Also, I have a Military soldier girl and boy as my students in the classroom. I also hug an area with different animals, Different colors of blocks, chairs, Tablets, Library, lamp, flag, etc. For the teachers, I have a African, Indian and Asian

I will now explore the reasons on why I have included the creative areas and sections in my classroom.

#### 1. Block Area,

This field will help the child to be creative through shared, built, and teamwork. This field will help children through their imagination and their relationships in their daily lives to create a stratum. This area includes various types of blocks, cars, signs for transport, community members, and so on. The child will be helped in this field by cognitive, social, and motor skills, gross and fine.

#### Arts, Craft, and Painting.

I have designed classroom art, crafts, and painting areas to help children create open arts. This area opens the creativity of the child to support them. It helps them through visual art to express their feelings. This area includes various arts and artisanal materials, like fingers, collage materials, leaves, aquarelle paint, painted brush forms, etc. They will also be painted stainless steel, where the child can paint his own choices. In general, this area will help the children to develop their cognitive, social, and emotional abilities.

#### Dramatic Area

It helps the child to be creative, pretending to act on what they are exposed to, and it also contributes to the imagination by creating characters, naming, and so on. This area will make it

possible for children to be their genuine selves. This will help children to practice the arts of everyday living, cognitive, social-emotional, their gross and good motor skills.

#### Library, and Listening Area.

This is an area that helps the child choose a book of his or her own choice. It helps your child learn how to self-regulate. It also helps them to think independently. This field supports their emotional and cognitive skills.

#### Computer Area

This area is aimed at helping the child explore technology. The child can turn the computer on and off. It also supports them in choosing their own creative games. This will help children with motor skills and cognitive skills.

#### Music Area

It will help you to discover the musical talents of the child. It helps you decide which musical instruments you like. It also allows you to dance to express yourself. This field supports the children in their cognitive, social, emotional and fine motor skills.

#### Mathematics, and Science Area

The field of mathematics helps the child to study measurement and quantity. The field of mathematics will help the child think. The area of math will contain scales, a tope, puzzles and so on. The field of science can help the child to learn about different animals and where their food came from. Both areas help kids build their cognitive abilities.

#### Writing Area

This area will assist children in drawing and writing open arts. It helps the child to think about how to look after itself.

#### Bathroom

The children learn to use the bathroom independently with a bathroom in the classroom. It allows your child to learn how to live every day.

#### Sink

The sink in the school next to the arts area can help children learn to clean up if they have a messy art. It will promote classroom independence.

#### Seating area for the children.

This area helps children to have a family lunch and share what they want to talk about. Additionally, if you want to relax, there are extra places for children. It helps them to be at ease.

## Conclusion

In brief, this class is designed to help children move freely, racially and culturally integrated around the classroom. Teachers can relate to the child in the classroom. In this classroom there will be open art creativity.
