

KERNING

The spacing between letters or characters in a piece of text to be printed.

BLAZING

BLAZING

TRACKING

refers to an optically consistent degree of increase (or sometimes decrease) of space between letters to affect visual density in a line or block of text.

Another adjustment to type that hasn't been mentioned is Tracking. Tracking is very similar to kerning in that it is the spacing between individual characters, but tracking is the space between groups of letters rather than individual letters. Tracking affects the overall character density of the copy. Other than the actual effect that it could have on readability of type, tracking would be used to make lines of type even. Tracking will help to eliminate widows and orphans in paragraphs. Widows are when the
