

# Parallel Non Interacting Universes.

Nija DeVries; nija.devries001@stu.bmcc.cuny.edu

## Intro

### Intro

The Mirror Dimension is my artistic vision of the idea of parallel non-interacting universes. Each universe exists as individually colored lines parallel, varying in size and curvature. By connecting these lines with a silver lining provides an interesting pattern of parallelograms, triangles, and other shapes.

## Materials

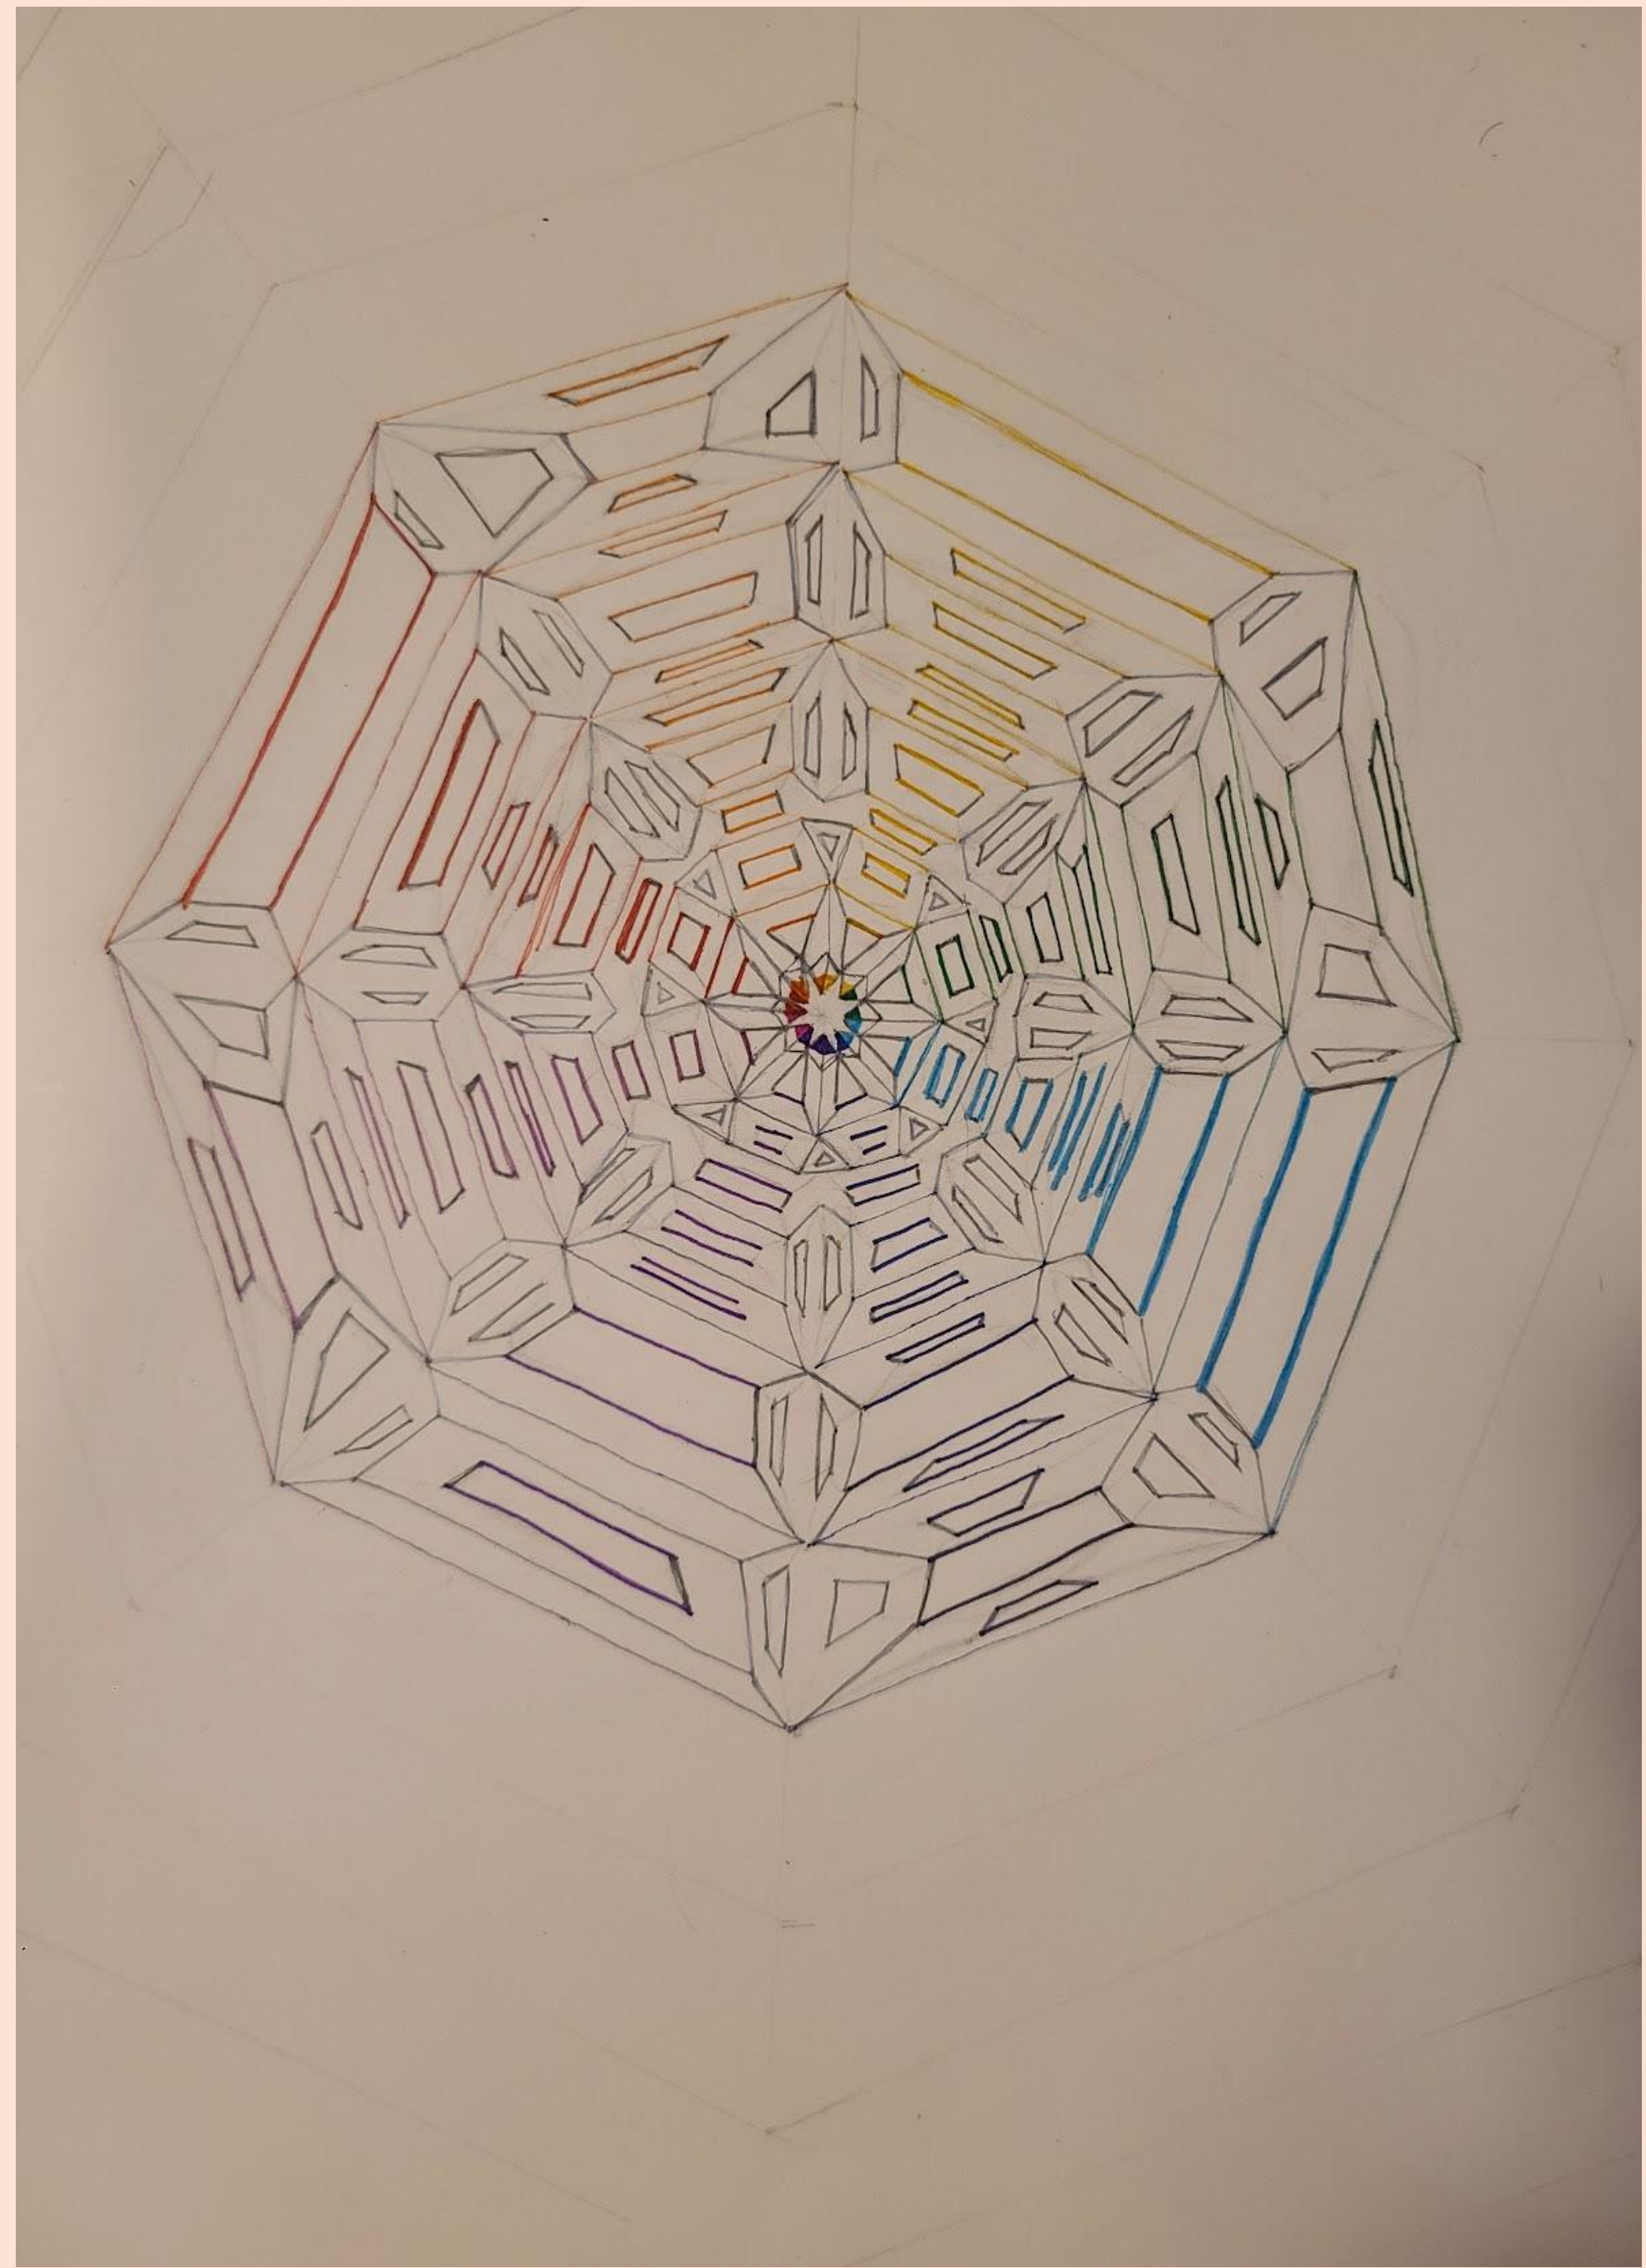

### Materials

For my materials, I used a Blick Studio Drawing Pencil, a Blick Studio Drawing Pad 11x14, various colored markers, and a light blue Sharpie

## Results

### Results

By connecting these lines with a silver lining i was able to provide an interesting pattern of parallelograms, triangles, and other shapes. The whole reveals an optical illusion of numerous rooms descending or an meticulously cut diamond.

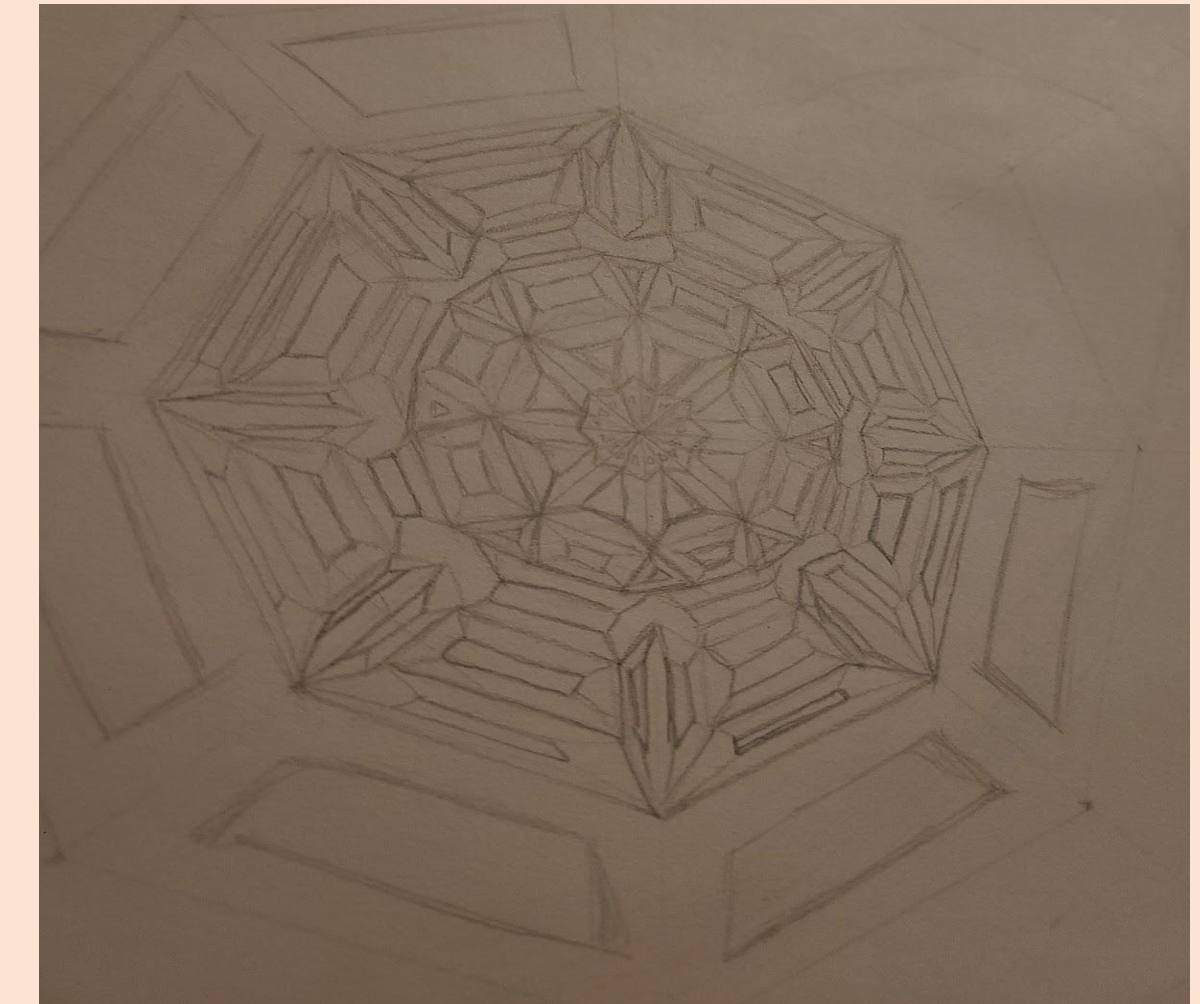

## Method

### Method

The lines in the drawing are imperfect to purposely reflect the nature of our universe to me. Kepler discovered planets move in ellipses instead of perfectly circular orbits, so no particular attention was made to straightening each line.

## Conclulsion

### conclulsion

I conclude that the best visual description of parallel non interacting universes could be best represented viewing one's many reflections descending in a room of mirrors.
