

17.1 Power and Authority

Sociologists examine government and politics in terms of their impact on individuals and larger social systems. Power is an entity or individual's ability to control or direct others, while authority is influence that is predicated on perceived legitimacy. Max Weber studied power and authority, differentiating between the two concepts and formulating a system for classifying types of authority.

17.2 Forms of Government

Nations are governed by different political systems, including monarchies, oligarchies, dictatorships, and democracies. Generally speaking, citizens of nations wherein power is concentrated in one leader or a small group are more likely to suffer violations of civil liberties and experience economic inequality. Many nations that are today organized around democratic ideals started out as monarchies or dictatorships but have evolved into more egalitarian systems. Democratic ideals, although hard to implement and achieve, promote basic human rights and justice for all citizens.

17.3 Politics in the United States

The success and validity of U.S. democracy hinges on free, fair elections that are characterized by the support and participation of diverse citizens. In spite of their importance, elections have low participation. In the past, the voice of minority groups was nearly imperceptible in elections, but recent trends have shown increased voter turnout across many minority races and ethnicities. In the past, the creation and sustenance of a fair voting process has necessitated government intervention, particularly on the legislative level. The *Reynolds v. Sims* case, with its landmark "one person, one vote" ruling, is an excellent example of such action.

17.4 Theoretical Perspectives on Government and Power

Sociologists use frameworks to gain perspective on data and observations related to the study of power and government. Functionalism suggests that societal power and structure is predicated on cooperation, interdependence, and shared goals or values. Conflict theory, rooted in Marxism, asserts that societal structures are the result of social groups competing for wealth and influence. Symbolic interactionism examines a smaller realm of sociological interest: the individual's perception of symbols of power and their subsequent reaction to the face-to-face interactions of the political realm.
